

Team Evaluation

Team: Lightning McMeme

Abdallah Hashem - SID 916000709

I was in charge of plotting the two different graphs (record and real time) with Upamanyu. Clay mainly worked on research for our extra features. I mainly coded the record functions and integrated the numeric box to adjust the record time. Upamanyu worked on extra functions such as analyzing the graph based on the information provided by the research conducted by Clay. The whole team sat down to discuss and design the GUI design. All team members agree that all the team members performed their tasks on time and in the most of their knowledge.
